

Board Vulnerability Remediation Summary

Board and senior leadership | CVE-2026-48172 | Pack PF-20260527-54588be9
Generated 27/05/2026, 00:39:07. Decision posture: Defer Pending Evidence. Readiness: Blocked.

Decision Snapshot

Vulnerability	CVE-2026-48172
Title	LiteSpeed cPanel Plugin Privilege Escalation Vulnerability
Severity	Critical
Decision posture	Defer Pending Evidence
Readiness	Blocked (0)
Final approval	Not issued
Source pack	Immutable and preserved

Evidence, Trust, and Signing

Signed pack	PF-20260527-54588be9
Verification	Verified
Signing provider	Azure Key Vault
Signature algorithm	ES256
Governance manifest SHA-256	32d8c68989fd52a6b3c055048aa95fc296d1e69d591eddf2d757a4aded8435da
Evidence references	2

Source Intelligence

Source ref	Class	Review	Evidence
src-cisa-kev-CVE-2026-48172	Kev Record	Pending Review	Referenced
src-first-epss-CVE-2026-48172-2026-05-26	Epss Signal	Pending Review	Referenced

Bayesian Advisory

Availability	Generated
Advisory boundary	Advisory only; cannot close gates or approve risk
Recommended posture	Defer Pending Evidence
Exploit probability posterior	50%
Business impact posterior	35%
Patch feasibility posterior	27%
Change risk posterior	52%
Deferral risk posterior	54%

Vendor and Threat Landscape

Vendor intelligence	Not generated
Threat landscape	Source-bound
Active exploitation signals	10
Critical open advisories	2
Patch maturity	Unknown
Source review	Pending review unless explicitly accepted

Blockers and Required Human Actions

Blocker / Action	Owner	Required outcome
Affected Asset Scope	Accountable service/security owner	Assign owner, attach reviewed evidence, and rerun deterministic compile.
Human Review Signoff	Accountable service/security owner	Record accountable approval event after evidence review.
Patch Availability	Accountable service/security owner	Assign owner, attach reviewed evidence, and rerun deterministic compile.
Vulnerability Identity	Accountable service/security owner	Assign owner, attach reviewed evidence, and rerun deterministic compile.
Human approval	CAB / security lead	Explicit approval remains required

Source-Pack and Current-State Separation

The signed source pack preserves the compiled evidence state at generation time. Current-state overlays, post-pack evidence events, human approvals, and later reviews must be recorded as separate accountable events.

Decision Boundary

PatchForge is a governance product. It does not scan environments, generate exploit code, provide procedural exploit steps, deploy patches, mutate production systems, approve CAB decisions, or accept risk autonomously.
